2 October 2020

#### **Declaration of test and assessment**

Danish Technological Institute has performed tests of the efficiency for inactivation virus of the Jimco MAC500 air purifier.

The test was conducted with the unit installed in a 20 m<sup>3</sup> sealed room. The efficiency of the air purifier was tested using MS2 bacteriophages (ATCC 15597-B1) on host *Escherichia coli* (ATCC 15597) as a virus surrogate. The rate of inactivation of the aerosolized MS2 was determined as the difference between the natural inactivation rate and the inactivation rate measured during the use of the Jimco MAC500 air purifier. These inactivation rates were determined by sampling of the air in the chamber over a 2-hour period. The significant and consistent difference between the Natural decay test and the Product test clearly shows a reduction of the concentration of airborne and active MS2 caused by the air purifier.

Based on the measured inactivation efficiency of the MAC500, the reductions in % and in log-reductions are calculated and are found in the table below:

Product attribution	1 hour	2 hours	3 hours
Reduction, %	89% ± 8%	99% ± 2.3%	99.9 ± 0.5%
Log-reduction (base 10)	0.97 ± 0.24	$1.93 \pm 0.47$	$2.9 \pm 0.71$

According to Kowalski\* and Walker<sup>+</sup> the UV-susceptibility for bacteriophage MS2 is lower than the UV-susceptibility for the enveloped virus, vaccinia virus. Hence, the indicated efficacy of the tested MAC500 UV-C device to degrade the bacteriophage MS2 will be at least similar to the efficacy against enveloped vaccinia virus. Efficacy against vaccinia virus allows for a claim for efficacy against all enveloped viruses (e.g. MERS-CoV, SARS-CoV-1 and SARS-CoV-2) according to DS/EN 14885:2018.

### THE COVID-19 BATTLEGROUND HAS CHANGED THE WAR OF COVID-19 HAS MOVED FROM SURFACES TO AIR

No. 6 0

### CLEAN ENVIRONMENT Using the forces of nature

JIMCO A/S recommends placing a MAC500s in all rooms and areas where people are present and especially where the risk of disease spreading is high.

**TECHNICAL DATA** UV lamp: 1x8 w Voltage: 230 V

Power consump: 25 w Operating lamp: 8000 hours Room area: 60 m3 Length: 310 mm Height: 90 mm Width: 90 mm The MAC500s must be placed as high as possible in the room and can cover an area of 60 m3.

For information please contact. Michael Kløcker Business Unit Manager E: mk@jimco.dk

T: +45 2149 3348

The MAC500s has been documented to reduce airborne virus. But the MAC500s should not be the only measure in the fight against the pandemic. It is important to still follow all guidelines from authorities.
